THE LATEST ENTRANT

ATELIERS 

How is it that the latest company in the field of metal cladding has taken less than 10 years to shape its market?

“

You're familiar with the following universal theory; everyone can identify with it: one of the great enemies of humankind – of our human way of thinking – *is habit*.

The habit of **thinking within a certain framework** not because we have established it ourselves, but just because it is there, locking us into an ultimately comfortable standard process: Thinking like Mr. Average.

Our story perfectly embodies how to buck this trend: we are the latest entrant to the French metal cladding market. Despite being the most recently established company, in just over 10 years, we have built a reputation that is unrivalled in the sector, consistently outpacing the competition with our original and desirable designs; **our influence is clearly unrelated to our economic weight.**

10 YEARS

OF FIRSTS

IMPACT

- first to reinvent the aesthetics of metal clad buildings
- first to bring steel cladding into towns and cities
- first to offer a 30-year warranty
- first to invent a random facade
- first to offer low carbon steel as standard
- first selective lacquering of a pre-painted coil

IMPACT DESIGN

We have pushed back the boundaries and brought steel cladding **into cities and towns**. Offices, apartment blocks, interior design – a significant part of our business is generated by projects outside industrial buildings; steel cladding is now considered a desirable element.

We have consulted architects, builders, artisans and contractors. Together, we have radically changed the scene in just a few years. Ateliers 3S impacts on its market in terms both of building aesthetics and environmental concerns, and is creatively liberating.

This positive impact becomes yours also. It is encoded in your buildings. **Permanently.**”

IMPACT CLIMAT

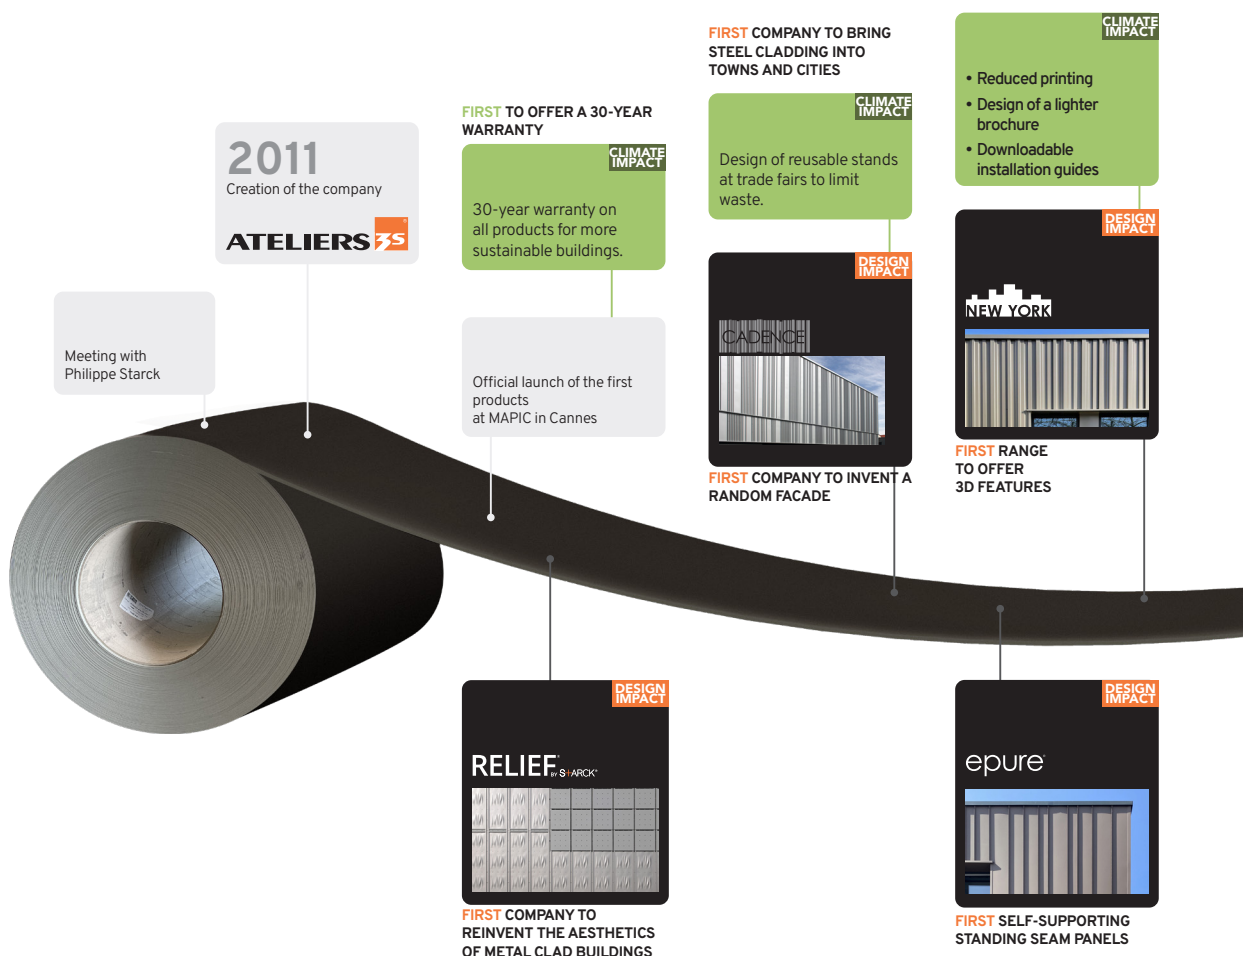

Our **30-year warranty** – ensuring that our products last three times longer – was our first step in an eco-friendly approach to sustainability and economy. However, while steel can be recycled repeatedly, the recyclable volume currently available is only sufficient to meet a quarter of global demand. The future therefore lies in low carbon steel.

As of 2024, we are the first company to offer the new low carbon steel as standard. Climate concerns are not an option; by anticipating that the carbon footprint of any building will be a determining factor in its construction, we are offering our customers the opportunity to be in phase with future trends.”

OUR

HISTORY

NEW YORK

NEW YORK RANGE

NEW YORK

Facades reach for the sky

Conquering the 3rd dimension!

Like the famous skyline, for the first time, the NEW YORK range plays with rib depth, letting the shadows do the work. The profiles of these visually impressive designs offer three unique signatures and, above all, provide an endless number of combinations.

MANHATTAN

BROOKLYN

QUEENS

3 Profiles = 3 QUARTERS

Always very easy to install

Designed according to traditional steel cladding installation rules, NEW YORK panels are as easy to install as a classical profile. New or renovation, they adapt naturally to all types of systems and projects.

INSTALLATION

FIXING THE PANELS

With simplicity in mind, the rhythms of the NEW-YORK range should not be broken by prominent screws. It is advisable to choose the most discreet models offered by manufacturers. Here are some examples particularly well suited to the task.

FIXING ON METAL FRAME

FIXING FOR DOUBLE-SKIN CLADDING

FIXING ON TIMBER FRAME

Available in the RAL color of your choice

S TET SCREW HEAD

BEL VIS SCREW HEAD

NEW-YORK range screws are a visible part of the façade.

As well as complying with standards, particular care must be taken to ensure that it looks good. The shape of the screw head and its colour can be adapted to each building.

SECONDARY FRAMING

Metal framing «L»

Metal framing «Z»

Metal framing «Ω»

Ajustable metal framing «Z»

Ajustable metal framing «Ω»

Timber frame

FLATNESS OF SUPPORT

The secondary framing elements must be sized by the installation company. Metal framing should be at least 1.5mm thick.

The flatness of the support is essential when installing the panels.

Regardless of the type of secondary framework chosen (metal or wood), it must comply with a maximum permissible co-planarity of 2mm over three supports.

QUEENS 980

SCREWING PATTERN FOR NEW-YORK PANELS

ATELIERS 3S offers you, for each panel model, a technical optimization with minimal aesthetic impact. By placing the screws as close as possible to the ribs, they are concealed by the shadow of the wave and are more discreet.

Particular attention must be paid to the tightening torque of screws located in flat areas to avoid any deformation of the facing.

When the different types of profile are mixed on the same façade, as far as possible put all the screws on the same side of the central rib, to ensure visual uniformity.

MANHATTAN 780

BROOKLYN 950

DOUBLE-SKIN INSTALLATION

BUILDINGS WITH METAL FRAMING

NEW-YORK is a traditional cladding system installed in accordance with the RAGE rules (French steel cladding installation recommendations). It is perfectly suited to double-skin installation.

The flatness of the support is very important for a quality finish, and an adjustable secondary framework is recommended for horizontal installation.

The sheets should be fixed in accordance with RAGE recommendations, using the appropriate screws and bolts according to the type of building.

TIMBER-FRAMED WALLS

TIMBER-FRAMED WALLS

The framework and its installation must comply with Cahier CSTB 3316.

In the case of a timber frame, a ventilated air space must be provided.

NEW-YORK cladding complies with RAGE rules and does not require an additional rain screen.

The flatness of the support is very important for a quality finish, and an adjustable secondary framework is recommended for horizontal installation.

The sheets should be fixed in accordance with RAGE recommendations, using the appropriate screws and bolts according to the type of building.

EXTERNAL WALL INSULATION (EWI) ON MASONRY WALLS WITH METAL FRAMING

EXTERNAL WALL INSULATION RENOVATION

The NEW-YORK range can be used in the construction or renovation of buildings with external wall insulation (EWI), as all the profiles in the range are suitable for this type of installation.

The framework and its installation must comply with CSTB Specification 3194. Load-bearing profiles must be fitted at the top and bottom of the cladding, and must be sized accordingly.

The flatness of the support is very important for a quality finish, and an adjustable secondary framework is recommended.

EXTERNAL WALL INSULATION (EWI) ON MASONRY WALLS WITH TIMBER FRAMING

EXTERNAL WALL INSULATION RENOVATION

The flatness of the support is very important. Adjustable brackets for a quality finish, and an adjustable secondary framework is recommended.

The adjustable angle brackets ensure that the framework is perfectly flat.

The framework and its installation comply with CSTB Specification 3316.

EXTERNAL WALL INSULATION (EWI) ON MASONRY WALLS WITH METAL FRAMING / HORIZONTAL APPLICATION

HORIZONTAL INSTALLATION

NEW-YORK range like any classical steel wall cladding can be installed horizontally.

The installation must comply with the RAGE rules (French steel cladding installation recommendations). The layout must take into account the maximum length of the sheets: 8000mm. Specific finishing elements must be provided.

The cladding should be cleaned regularly with water to prevent the accumulation of dust on the horizontal parts.

The flatness of the support is very important for a quality finish, and an adjustable secondary framework is recommended for horizontal installation.

The sheets should be fixed using the appropriate screws and bolts according to the type of building and framing.

INSTALLATION ON EXISTING DOUBLE-SKIN CLADDING

RENOVATING A BUILDING WITHOUT REMOVING THE EXISTING CLADDING

The NEW-YORK range can be installed in the renovation of buildings on existing wall cladding.

The flatness of the support is very important for a quality cladding installation, Adjustable accessories must be used.

FINISHING PROFILES

Beyond the aesthetic quality of its cladding panels, a successful metal facade requires precise and well-designed finishing profiles. ATELIERS 3S takes particular care to offer discreet elements that connect with the styles of the associated cladding.

In these pages, you'll find a selection of models that are fully adaptable to the actual dimensions of your project.

No matter how precise your installation is, finishing profiles will always be custom-made elements. Please don't hesitate to provide us with your exact dimensions and any other installation drawings.

NEW YORK cladding has variable ribs heights, so it is recommended that the total depth of the cladding, it is recommended that the total depth of the cladding of 60 mm be taken into account for each finishing profiles design.

In areas with complex single points, the QUEENS model and its constant low height of 20 mm will make finishing profiles much easier.
